

8 Bishopsgate

Style installs moveable walls at 8 Bishopsgate

In the concourse of 8 Bishopsgate, Style installed a glazed sliding folding wall system, level two houses a combination of Dorma Huppe Variflex solid and glazed walls, with semi-automatic operation. On level 50, Style installed a Dorma Huppe Variflex, which is also semi-automatic.

With a 52db acoustic rating on the glazed walls, and a 59db rating on the solid walls, these are very highly rated acoustic moveable walls, offering real privacy.

“The concourse wall enables the operator to open up the space for large functions,” explained Michael Porter, Style’s group sales director, “however when the wall is closed, the area still enjoys ample light thanks to this being a glazed solution.

“Level 2 provides a number of bookable meeting spaces and breakout areas. On level 50, we installed a series of walls within the viewing gallery that enables this space to be used as a flexible conference facility with breathtaking views of London.”
