

Center Parcs chooses moveable walls from Style

At Center Parcs Sherwood Forest, Style worked with Architects, Jackson Design Associates, and contractors, The Jordon Group, to create flexible space within its conference and meeting centre, called The Venue.

To achieve this, 9 Dorma Huppe Variflex moveable walls were installed offering extensive flexibility to reconfigure the room for various events.

With an impressive 55dB acoustic rating on all walls, concurrent meetings and events can take place undisturbed. Numerous pass doors give staff ease of access between rooms.

A common stacking area allows the entire floor to be opened up into one large, open place space when larger events are taking place and the Variflex is so effortless to manoeuvre that the room can be changed for multiple events every day.

“Center Parcs has a keen focus on sustainability and minimising its carbon footprint,” said Steve Williams, Style’s sales director for the Midlands, “and the Variflex walls fit that model perfectly thanks to their EPD certification in accordance with ISO 14025 and EN15804.”
