Glass and solid acoustic moveable walls

A Dorma Huppe Variflex glass, semi-automatic moveable wall creates a meeting room within the main breakout area. This has a fully glazed single pass door so that the wall can be left in position for extended periods.

A solid Dorma Huppe Variflex moveable wall, also with semi-automatic operation, creates an additional meeting area near a pool room and relaxation area. With a magnetic writable surface on one side the wall can be used during brainstorming, training and workshops.

With 47dB and 46dB acoustic ratings respectively, meetings can take place without being disturbed from outside noise.

“This is a very forward-thinking and highly sustainable building,” said Angela McGowan, sales director at Style Scotland.

“The Dorma Huppe moveable walls are EPD (Environmental Product Declaration) certified in accordance with ISO 14025 and EN15804, which means they are a perfect fit for this eco-friendly office.”
