

Baker McKenzie enjoys fully automated moveable wall solution

In the office's multifunction space, Style combined 3 Skyfold vertically rising walls and a Dorma Huppe Variflex ComfortDrive glazed wall to form a self-contained room in an open plan area, which can be further sub-divided into two individual meeting rooms.

To achieve this, the fully automatic, glazed Variflex wall moves into place to create an outer periphery to the conference room, forming a new corridor with pass doors.

The 2 Skyfolds then descend automatically from the ceiling to form the end walls, closing the room into a 'box' configuration. The additional Skyfold can then be used to further sub-divide the room into two individual units, as required.

Upstairs on level 11, Baker McKenzie has a terrace offering a stunning city vista. Here, a semi-automatic Dorma Huppe glazed moveable wall enables the creation of a private dining area or meeting room whilst continuing to enjoy the views.

Within the building, Style also installed a further glazed Variflex moveable wall and 4 additional solid Variflex moveable walls to give additional flexibility within the company's meeting suites.
