Style secures Horizontal Sliding Walls (HSW)

Moveable and partitioning wall specialist, Style, has further strengthened its partnership with the dormakaba Group by securing the exclusive UK distribution of its interior glass Horizontal Sliding Walls (HSW) range.

The partnership means that Style will now offer a complete end-to-end process for architects, contractors and end user clients for the specification, provision and installation of dormakaba's HSW partitioning systems.

Julian Sargent, Style's Group Managing Director, said: "dormakaba's HSW range is a world-leading portfolio of single glazed moveable partitioning wall systems, popular in airports, shops, shopping centres, stadiums, high rise winter gardens and banks.

"It means Style now has sole UK distributor rights of the full suite of moveable wall solutions from dormakaba/Hüppe enabling us to fulfil our customers' requirements in totality as well as expand into new markets - something we are thrilled to have achieved."

The relationship between Style and dormakaba is not a new one. The two companies forged a pioneering relationship over 15 years ago when Style became Dorma Hüppe's exclusive UK partner for its moveable walls range.

Since then, the partnership has gone from strength to strength, which is why dormakaba has entrusted Style with its highly desirable HSW interior glass systems range.

Andreas Tiedtke, dormakaba's Global Business Owner Interior Glass Systems, Vice President AS DACH, said: "We are delighted to extend our relationship with Style.

"As the UK's most prestigious moveable wall contractor, they can offer a complete solution to UK customers doing what they do best at securing specifications and installing our HSW range across our core target markets while we focus our time and investment in developing world-beating products."

QuickBlock wins Circular Economy Award and secures £80,000 funding

The innovative construction product QuickBlock has won the Circular Economy Award at the Scottish EDGE finals with an award of £80,000. The Award, introduced by Zero Waste Scotland, was given to the company for their unique rapid-assembly building blocks made from 100% recycled plastic.

Similar in concept to children's building blocks, QuickBlock allows structures to be assembled at speed without any additional tools, materials or skilled labour required. Ideal for a wide variety of applications, QuickBlock is flat-packed and easy to transport at a fraction of the weight of traditional blocks. Once on site, blocks can be in-filled to add strength and stability if required.

Accepting the Award, CEO Andrew Vincent said: "It's reusability means that structures can be assembled, disassembled and used again in different locations or to build entirely different things. Not many products are recycled, reusable and recyclable at the end of their life!"

For large projects, customers can get in touch for trade prices. QuickBlock kits are also available at www.quickblock.uk.
