

Dorma Hüppe launches unique end-panel for sliding partition

New to the market, Style is now able to offer a unique telescopic end-panel, available with the advanced Dorma Hüppe Variflex partitioning wall system.

The TEF closure panel greatly improves the aesthetics of the moveable wall as, once in position, it sits completely flush against adjacent panels. In addition, the TEF panel ensures an optimum acoustic seal is created every time.

Julian Sargent, group managing director of Style, explains: "This new development is something architects, specifiers, contractors and end-users have all been asking us for, as it removes any protrusion from the wall, or bulky and unsightly expanding end-sleeves.

"The TEF panel delivers exceptional benefits in terms of aesthetics and space flexibility that will be particularly important in areas such as boardrooms, commercial office space and conference facilities."

Offering flexible options, the end-panel is available with both semi-automatic and manually operated Variflex sliding moveable wall systems.

As the elements are manoeuvred into place, the telescopic panel is automatically activated with the press of a button, or in the case of manual systems, with a turn of the seal-expansion handle, creating a firm acoustic barrier with a superior flush finish.
