

STYLE UPGRADES SPACE FLEXIBILITY AT COVENTRY INDOOR ARENA

The Coventry Building Society Arena is an award-winning complex situated in the heart of the UK. To help maximise revenue opportunities for the exhibition and conference area, Style was commissioned to install a 10m-high Dorma Hüppe Variflex moveable wall, allowing the 54m-wide hall to be divided into two separate rooms or left as one vast, open-plan space. Delivering an excellent acoustic rating of 55dB, the partitioning wall allows concurrent events to run undisturbed on either side.

Ensuring the safe operation of such a large moveable wall, Style recommended the i-Track system, which uses a sequence of curves and internal track switches to allow the smooth and easy movement of the heavy panels.
