

Skyfold vertical-rising partitioning walls

Style Partitions

The Gothia Towers Exhibition Centre in Sweden has benefited from the installation of five, state-of-the-art, fully automatic, Skyfold vertical-rising partitioning walls.

Dividing the cavernous space, the row of Skyfold walls can be individually lowered at the press of a button, forming an exceptional acoustic barrier in minutes.

The Skyfold team recently selected Gothia Towers to showcase this advanced partitioning system, welcoming high-profile architects from across Europe to a presentation by the project architect, Olaf Hallberg of Abak Arkitektknor.

The talk was followed by a tour of the redesigned exhibition hall and the chance to see the magnificent Skyfold walls in action.

"Skyfold is a remarkable proposition and it really is quite jaw-dropping when you first see one unfold from the ceiling cavity," says Julian Sargent, group managing director of partitioning expert Style, sole distributor for Skyfold in the UK.
