

## London firm chooses combination of Skyfold and Dormaglas HSW

In the meeting room of a leading London tech firm, Style installed a Skyfold, fully automatic, vertically rising moveable wall with an impressive 54dB Rw acoustic rating. This pioneering moveable wall solution is housed discreetly in the ceiling cavity, and remains completely out of sight when not in use.

At the push of a button it descends gracefully into position, and to complement the interior design of the room, a RAL9021 Black Grey finish was chosen.

In the virtual reality area, a Dormaglas HSW was deemed the best option. This non-acoustic moveable wall offers simple and effective room division, ensuring the area retains its light and airy feel.

With the glass back painted in RAL 9016 White, it provides the required level of privacy when VR sessions are taking place.

“These two very different moveable wall solutions are a good example of the depth of our portfolio and our flexibility to find the right solution for each room,” said Michael Porter, Style’s group managing director.
