

Multiroll curtain partitioning system

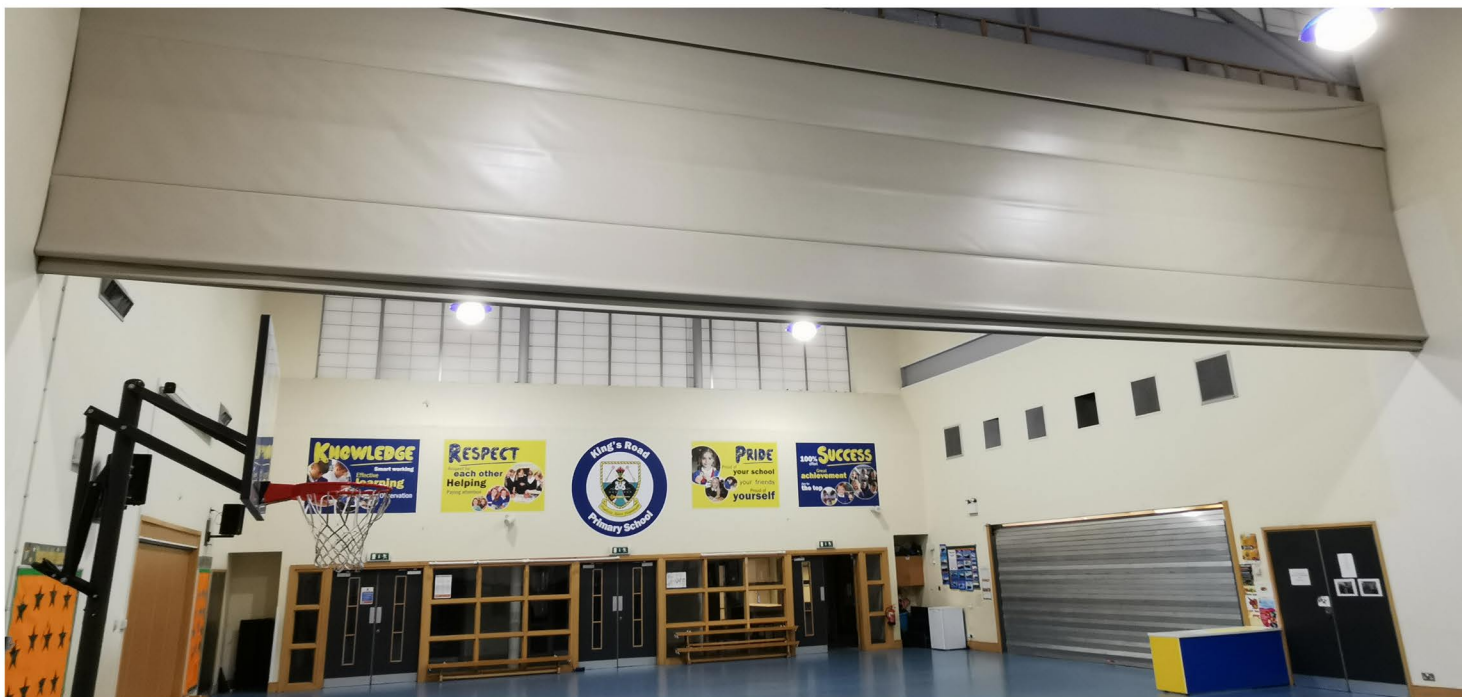

Style installed its Multiroll curtain partitioning system into the ceiling cavity, taking up zero floor space. Operated at the press of a button, the fabric-lined divide unfurls from above, lowering to create a safe separation for large, open spaces such as gyms and sports halls.

Multiroll can be either mounted in the beam area of the roof or invisibly fitted between a suspended ceiling. If required, it can also be fitted with a sound-absorbing, non-woven fabric to provide enhanced noise insulation.

User welfare is assured with each system coming with German TÜV-tested safety as standard. Available in a multitude of colours, the Multiroll enhances any interior décor.

“Due to the height of this room and its existing structural support, it was not feasible to install a modern sliding wall system,” said Angela McGowan, sales director at Style Scotland.

“The Multiroll offers the perfect solution as it allows school staff to quickly create two areas where different classes can gather to enjoy separate activities.”
